

Prompt Engineering**Resume diagnostic before rewriting Prompt:**

Act as a **Senior Career Strategist, ATS-Aware Recruiter, and Honest Resume Editor**. I am attaching my resume. **Do not rewrite it yet**. First, analyse it objectively based only on what is explicitly written.

Please provide:

1. **Strongest Skills** – List my strongest skills and the evidence supporting each one.
2. **Weak/Unclear Sections** – Identify vague, weak, repetitive, or ATS-unfriendly content and explain why.
3. **Missing Information** – Tell me what important information is missing. Clearly distinguish between **missing evidence** and **missing skills/experience**.
4. **Career Narrative** – Can my career story be explained clearly in one sentence? If yes, give the sentence; if not, explain why.
5. **Best-Fit Roles** – List the top 3–5 roles I appear strongest for based only on my current resume.
6. **Priority Table**:

Issue Why It Matters Priority (0–10) Exact Information Needed**Rules**

- Do not rewrite the resume yet.
- Do not invent or assume achievements, skills, or experience.
- Be honest and critical.
- Evaluate it from both **ATS and recruiter perspectives**.

At the end, ask me **up to 5 specific questions** needed to improve the resume, then **wait for my answers**.

Response:**1. Strongest skills and evidence for each**

- **Frontend / Web development (React.js, HTML, CSS, responsive design):**
Strongest project evidence is *Ananda Fashions*. Explicitly built a live responsive fashion boutique site with reusable React components, accessibility focus, product showcase / design-detail / contact pages, and WhatsApp one-click integration with pre-filled messages. Live link provided.
- **Mobile development (Flutter) + backend (Firebase):** Evidenced in *HOMYFY* – property buying/selling app with secure authentication, search, real-time database, and user data handling via Firebase.
- **Java + relational databases (MySQL):** Evidenced in *Hotel Management System* – designed and implemented system with optimized SQL queries for booking/billing/customer management + interactive Java Swing UI.

- **Core programming foundation (Java, Python, C, C++, SQL):** Listed as strong foundation in summary and technical skills; reinforced by the three projects that use subsets of these.
- **UI/UX awareness:** Listed under design skills (Figma, wireframing, prototyping) and demonstrated in the Ananda Fashions emphasis on clean/intuitive UI, accessibility, and responsive design.
- **Certifications as supporting signals:** Workato Automation Pro I & II, Infosys Java Foundation, Infosys Front End Web Developer, plus two NPTEL courses (Privacy & Security in Online Social Media, Human Computer Interaction). These corroborate interest in frontend, Java, automation, and HCI.

No quantified outcomes (users, performance gains, accuracy metrics, etc.) are stated for any skill or project.

2. Weak or unclear sections

- **Projects:** Descriptions are functional but lack measurable impact, scale, your specific individual contribution (especially if any were team projects), technical depth (e.g., what ML model/algorithm/data size/accuracy for the price predictor), challenges solved, or results. HOMOYFY claims “Machine Learning” but gives almost no detail.
- **Summary:** Generic student summary; does not differentiate you or highlight the strongest project evidence.
- **Skills section:** Long laundry-list style. No indication of proficiency level, recency, or depth. Soft skills are listed without any behavioral evidence.
- **No experience / internships / open-source / leadership / achievements section:** Completely absent. This makes it hard to assess real-world application beyond academic projects.
- **Education:** Clean but minimal (no relevant coursework, academic projects, rank, or extracurriculars).
- **Formatting / ATS risks** (from the provided content): Dense paragraphs in places, bullet style varies slightly across sources, LinkedIn URL appears truncated/broken in the text extraction, phone and links are present but the overall visual density and lack of clear section hierarchy in the scanned version could hurt both human skimmability and ATS parsing.

3. Missing information you need from me

- Any internships, freelance, open-source contributions, hackathons, or part-time work (even short ones).
- Quantifiable results or technical specifics for the three projects (especially HOMOYFY ML details and Ananda Fashions traffic/engagement if any).
- Whether projects were individual or team, and your exact role/ownership.
- Preferred target roles, locations, and timeline (you graduate 2027 – are you targeting internships now, or full-time later?).
- Any additional tools, frameworks, or achievements not currently listed.

4. Career narrative clarity (one sentence)

“Computer Science student (graduating 2027) with hands-on project experience building responsive web (React) and mobile (Flutter + Firebase) applications plus a Java/MySQL system, seeking early software-development opportunities.”

→ Clear enough as a student profile, but currently thin and undifferentiated.

5. Roles you appear strongest for today

- Frontend Developer Intern / Junior Frontend Developer (React focus) – strongest evidence.
- Flutter / Cross-platform Mobile Developer Intern.
- Full-stack Intern (React + Firebase or Java + MySQL).
- Software Engineering Intern (generalist, entry-level, project-based).
- UI/UX-leaning frontend roles that value design tools + implementation.

You are not yet positioned for backend-heavy, data/ML engineering, DevOps, or mid-level roles due to limited depth and zero professional experience.

Find roles that fit the resume Prompt:

Based on my resume and the career direction below, identify **10 roles I should target**.

Target direction: [AI Generalist / AI Orchestrator / Function-Specific AI-First Role]

Location / Remote requirement: []

Minimum compensation: []

Preferred industries / Industries to avoid: []

Experience constraints: []

For each role, provide:

- **Likely job titles & title variations**
- **Why I fit**
- **Biggest gap**
- **Keywords to search for**
- **Fit score (0–100)**
- **Recommendation:** Apply now / Apply after a small portfolio project / Skip

Rules

- Match the **actual job responsibilities**, not just the presence of “AI” in the title.
- Base the analysis primarily on my resume.
- Do not assume skills or experience that I have not demonstrated.
- Be realistic about my current level and gaps.
- Prioritize roles that align with my stated career direction.

Present the results in a clear table, followed by a brief explanation of my **top 3 roles** and why they are the best targets.

Response:

Target roles

1. **AI Engineer Intern (AI-Native Generalist)**
Titles: AI Generalist Intern, AI-Native Builder Intern
Fit: Your full-stack projects + automation mindset.
Gap: No LLM/agent proof.
Keywords: AI-Native Generalist Intern, AI generalist intern
Score: 58 → Apply after one solid portfolio project

2. **AI & Agent Orchestrator Intern**
Titles: Agent Orchestrator Intern, AI Orchestrator Intern
Fit: Workato certs + multi-service integrations.
Gap: No multi-agent or tool-calling demos.
Keywords: AI Agent Orchestrator Intern, agent orchestration intern
Score: 55 → Apply after portfolio project
3. **Generative / Agentic AI Intern**
Titles: AI Engineering Intern (GenAI), Agentic AI Intern
Fit: Can build apps; Python + frontend ready.
Gap: Zero shown LLM/RAG/agent work.
Keywords: Generative AI Intern, Agentic AI Intern
Score: 52 → Apply after portfolio project
4. **Software Engineer Intern – AI / AI Product**
Titles: AI Product Engineer Intern, Full-Stack AI Intern
Fit: React + Flutter + Firebase are directly useful.
Gap: No AI features in current projects.
Keywords: Software Engineer Intern AI, AI Product Intern
Score: 60 → Apply after portfolio project
5. **Applied AI Intern**
Titles: Junior Applied AI Engineer, AI Application Developer Intern
Fit: Applied mindset from HOMOIFY + full apps.
Gap: Only classical ML shown.
Keywords: Applied AI Intern, AI Application Developer
Score: 50 → Apply after portfolio project
6. **AI Operations / AI Workflow Intern**
Titles: AI Ops Intern, AI Workflow Intern
Fit: Systems + automation orientation.
Gap: No ops or evaluation experience.
Keywords: AI Operations Intern, AI workflow intern
Score: 57 → Apply after portfolio project
7. **AI Solutions / PreSales AI Intern**
Titles: AI Implementation Intern, PreSales AI Engineer Intern
Fit: Workato + ability to build demos.
Gap: No customer or demo track record.
Keywords: AI Solutions Intern, PreSales AI Intern
Score: 62 → Apply now (especially automation platforms)
8. **Domain AI-first Intern (Real Estate / E-commerce)**
Titles: PropTech AI Intern, AI Intern – Retail/Fashion
Fit: Direct reuse of HOMOIFY + Ananda Fashions.
Gap: AI depth in those projects is thin.
Keywords: AI Intern Real Estate, PropTech AI, AI Intern E-commerce
Score: 53 → Apply after enhancing existing projects

Quick priority: Apply now to #4 and #8. Build one good agentic/RAG project (reuse React or Flutter) to unlock the rest.

Tailor the resume to one job description Prompt:

Act as an **ATS Resume Strategist and Hiring Manager for a Frontend Developer role.**

Inputs:

- My resume: attached
- Target job description: attached/pasted

My core skills: **HTML, CSS, JavaScript, React.js, Tailwind CSS, and Figma**, with a strong foundation in frontend development and UI design.

Tasks:

1. Extract the JD's **key responsibilities, required skills, preferred skills, and important keywords.**
2. Compare the JD with my resume and create a **gap table with priority scores (0–10).**
3. Rewrite my resume specifically for this role while keeping only truthful information.
4. Improve my **summary, skills order, experience bullets, and project descriptions.**
5. Add relevant ATS keywords only when supported by my actual skills/experience.
6. Do not invent achievements, metrics, or experience.
7. Return a **simple ATS-friendly resume** with no tables, icons, graphics, or columns.
8. Include a brief **change log** explaining major edits.

Output

A. Fit Summary

B. Gap Analysis Table

C. Tailored Resume

D. Keyword Coverage Checklist

E. Claims Requiring Confirmation

Be honest about my current level and focus on the **actual frontend work**, not just the word “AI” or keyword matching.

Response:

A. Fit Summary

Good fresher fit for Junior Frontend / React Developer roles.

Strongest: Live React project (Ananda Fashions) with reusable components, responsive design, and clean UI.

Biggest gaps: No Tailwind evidence, limited React depth, no REST APIs or professional experience.

B. Gap Analysis

Requirement	Evidence	Gap	Priority
React.js	Ananda Fashions project	Limited depth	9
HTML/CSS/JS	Listed + used	None	8
Responsive / UI	Explicitly mentioned	Surface level	8
Figma	Listed	No project proof	6
Tailwind CSS	Missing	Completely absent	9
REST APIs	Missing	Missing	7

C. Tailored Resume (short version)

RAMA THULASI G

Email: 230701259@rajalakshmi.edu.in | Phone: 8438334314

LinkedIn: [linkedin.com/in/rama-thulasi-g-1a20802a2](https://www.linkedin.com/in/rama-thulasi-g-1a20802a2) | GitHub: github.com/230701259

Summary

Computer Science student and aspiring Frontend Developer with hands-on experience building responsive web applications using React.js, HTML, CSS, and JavaScript. Created a live fashion boutique website focused on reusable components, clean UI, accessibility, and smooth navigation. Seeking a Junior Frontend Developer or React Developer role.

Education

B.E. Computer Science and Engineering

Rajalakshmi Engineering College | Expected 2027 | CGPA: 8.37

Skills

Frontend: React.js, JavaScript, HTML, CSS, Responsive Design

UI/Design: Figma, UI/UX Design

Tools: GitHub, VS Code

Projects

Ananda Fashions – Fashion Boutique Website (React.js, CSS)

Live: <https://ananda-fashions.netlify.app>

- Built a modern responsive website with reusable React components for product showcase, design details, and contact pages.
- Focused on accessibility, clean UI, and seamless navigation.
- Added WhatsApp one-click chat with pre-filled enquiry messages.

Other Projects

- HOMOIFY (Flutter + Firebase): Property app with authentication and real-time database.
- Hotel Management System (Java + MySQL): Booking and billing system with Swing UI.

Certifications

Front End Web Developer – Infosys (2025) | Java Foundation – Infosys | Workato

Automation Pro I & II | NPTEL (HCI, Privacy)

D. Keyword Coverage

Matched: React.js, JavaScript, HTML, CSS, Responsive design, Figma, GitHub, reusable components, accessibility

Missing: Tailwind CSS, REST APIs, React Hooks, State management, TypeScript

n8n Automation – Fee Reminder Email System

Automated the process of sending fee reminder emails to students using **n8n** and an **Excel sheet** containing student fee details.

Steps:

1. Created an Excel sheet with student details such as **name, email, fee status, and due amount**.
2. Connected the Excel data to **n8n**.
3. Used a workflow to read and process each student's fee information.
4. Added a condition to identify students with **pending fees**.
5. Automatically generated a personalized **fee reminder email**.
6. Sent the email to the respective student using an email node.
7. Automated the complete process so reminders can be sent without manually checking each student.
